

Project 1: Basic classification

WU1

By computing $\text{mean}((\text{datasets.TennisData.Y} > 0) == (h.\text{predictAll}(\text{datasets.TennisData.X}) > 0))$, you are actually computing $\frac{1}{N} \sum_{k=0}^{N-1} [y_k = f(\mathbf{x}_k)]$, which, by definition, is accuracy (1 - training error).

WU2**WU3****WU4****WU5**
